MiaEssential

for an optimal basic supply
of vitamins and amino acids

without added lactose

supporting metabolism

supporting defences

Complementary feed to give your cat an optimal basic supply of vitamins and amino acids.

MiaEssential provides your cat with essential, vital substances which its body cannot produce in sufficient quantities.

The active ingredient taurine is important for the preservation of eyesight and to support cardiac function. Lecithin is actively involved in fat metabolism, while carnitine plays an essential role in energy metabolism for the passage of fatty acids. Additional amino acids and unsaturated fatty acids support the defensive reactions of the body.

Benefits at a glance:

- supplies the cat with essential nutrients
- supports eyesight and cardiac function
- contains antioxidants to protect against oxidative destruction

MiaEssential is available in both tablet and paste form.

Feeding recommendation:

1–2 tabs/5 kg cat/day
