MiaSkin

for optimal support of skin
and coat metabolism

The art of mixture

MiaSkin

for optimal support of the skin and coat metabolism

special complex of active ingredients

essential fatty acids

protective antioxidants

The skin is in a constant 'renewal process' and requires supporting nutrients for its optimal metabolism. Our synergistic complex of vitamins and amino acids increases, among other things, the concentration of ceramides and free fatty acids, regulates the growth of epidermal cells, and ensures the skin integrity for protection against external agents and dehydration.

The combination of minerals with sulphurous amino acids helps to prevent dandruff. Other additives support the claw growth, ensure a balanced composition of the lipid film and prevent the synthesis of inflammatory mediators.

Benefits at a glance:

- optimal vitamin and mineral supply against dull, dry, flaky skin and hair loss
- strengthens the natural skin barrier
- controls inflammation through essential fatty acids
- contains antioxidants to protect against oxidative stress

MiaSkin is available in both tablet- and powder form.

Feeding recommendation:

1–2 tabs/10 kg dog/day
